SUMMARY

Product-minded engineer who turns ambiguous problems into shipped systems, using structured reasoning, data analysis, and AI tools to move from requirements to working platforms. Built and owned an AI evaluation product end-to-end from a team's undefined need, alongside a self-hosted infrastructure ecosystem and real-time multi-agent platforms serving 1000+ users.

EDUCATION

Jaypee Institute of Information Technology **Noida, Uttar Pradesh**
Bachelor of Technology, Computer Science and Engineering | CGPA: 7.84/10 *July 2027*

PROJECTS

InfraKit - Self-Hosted Infrastructure Middleware Ecosystem - github.com/SwayamGupta12345/infrakit | Open Source
Backend / Systems | Node.js, Express, SQLite, npm workspaces

- Designed and independently built 11 modular middleware packages (@infrakit/*) that replicate AWS/GCP managed infrastructure services (API Gateway, WAF, CloudWatch, SQS, ElastiCache, Lambda) as self-hosted, embeddable Express middleware backed by SQLite and a shared event bus, with each package operable standalone or connected to a shared core.
- Implemented a three-state circuit breaker, sliding-window rate limiter, and a brute-force/SQLi pattern-flagging shield, each independently verified across standalone, core-connected, and config-driven test modes before integration.
- Diagnosed and fixed a cross-process cache-invalidation bug and an IPv6 key-collision bug in the request-tracking layer that was silently breaking brute-force detection across routes, both traced through live manual debugging sessions.
- Built an embedded, authenticated admin dashboard with live SSE event streaming, per-table rotation status views, and a blocked-IP management panel for real-time system observability across all 11 packages.

Mirai - Real-Time Multi-Agent AI Collaboration Platform (Python + GenAI) - https://mirai-pi.vercel.app | Open Source
Full-Stack / AI | Python, FastAPI, Next.js, WebSockets

- Architected and deployed a decoupled full-stack system (Next.js on Vercel, FastAPI on Render) with OAuth authentication and manual rate limiting, maintaining stable multi-service performance under concurrent user load.
- Built a real-time collaborative AI chat system using WebSockets with shared context, live message synchronization, and streaming responses, ensuring sub-second latency communication and consistent message edit and delete behavior during concurrent usage.
- Designed and built the backend API for a CrewAI-based multi-agent platform using FastAPI, coordinating specialized agents for reasoning, coding, and writing; onboarded 50+ users in week one.
- Open-sourced the project on GitHub, maintaining active issues and documentation to onboard external contributors.

Jaypee Learning Hub - Academic Resource Management Platform (Full-Stack) - https://jaypeelearninghub.great-site.net
Web Development

- Built and scaled an academic platform to 1000+ active users within 4 months, managing 1200+ resources.
- Architected the entire data model and backend logic independently, later refactoring database schemas and optimizing SQL queries to improve load times by 30%, data consistency, and overall system responsiveness.
- Structured and designed pages using semantic HTML and responsive CSS supporting screen widths down to 240px, from rough wireframe sketches, built entirely in vanilla JavaScript, CSS, and PHP with no frameworks.

WORK EXPERIENCE

Style My Space (AI Research & Product Intern) - **Remote** *Jan 2026- March 2026*

- Identified the team's need for a repeatable way to evaluate outputs across generative models, then scoped, built, and shipped a full-stack evaluation platform (Next.js, MongoDB, Cloudflare R2) that the team adopted directly into its workflow.
- Collaborated cross-functionally with the product team to define evaluation criteria, running structured tests across 50+ prompt variations and multiple generative models to build a data-driven model selection framework covering prompt adherence, output clarity, structural correctness, and consistency.
- Owned the product end to end as sole engineer, from requirements through interface design, building a comparison dashboard that handled 1,000+ generated assets with pagination and lazy loading so the team could review results without lag.
- Set naming and versioning conventions for asset handling across the platform, cutting duplication and retrieval friction, and built prompting interfaces that shortened the team's testing turnaround on repeated iterations.

DRID Internship (Project Intern) - https://github.com/SwayamGupta12345/drid-project-in-pygame **Remote**
E-Sports and Stress Management for Differently-Abled People *June 2024-Aug 2024*

- Worked with faculty mentors (Prof. Manish Kumar Thakur, Dr. Suma Dawn) to design and build a Python/Pygame educational game for stress management targeting differently-abled users, iterating on gameplay based on mentor feedback and user testing.

SKILLS

Tools and Platforms: Git, GitHub, Docker, DockerHub, Linux (CLI, Bash)
Data & Analytics: SQL (MySQL), NumPy, Pandas, Scikit-learn, Data Preprocessing, Matplotlib, Model Training, RAG, LangChain
Programming Languages: Python, C/C++, JavaScript, PHP
Web & Backend Technologies: HTML, CSS, DOM, Node.js, React, Express.js, REST APIs, MongoDB, Next.js
Soft Skills: Agile Project Management, Cross-functional Collaboration, Technical Leadership, Public Speaking

ACHIEVEMENTS

- Solved 670+ problems on LeetCode (Swayam_Gupta) with a contest rating of 1,721; Codeforces (swayam12) rating 1,324 (Pupil).
- AWS Cloud Practitioner coursework completed Certificate .
- McKinsey Forward Program - strategic thinking, agile problem-solving, leadership, and communication. Certificate Badge.
- Technical Head, AI/ML Club - Organized a club-level hackathon and mentored peers on ML and system design.
- Completed Krish Naik's Data Science, ML, DL & NLP Bootcamp on Udemy. Certificate
